SUPPLEMENT

25X1X6

1. After the AEG-Transformatorenwerk in Berlin-Oberschönnewide had been dismantled by the Russians, the remaining workers installed old machines as well as some new ones. The factory, now a Soviet AG controlled by the Technical Russian Government Commission, employed 600 men in May 1947.
2. The plant is directed by a Soviet engineer, Major Moszolo. His Russian assistants number approximately ten technicians, ranging in grade from lieutenant to major. The German testing engineers are Dipl. Ing. Meduna and Bätz; German production engineers are Ing. Boback, Gaserich, Lubach, and Mecke.
3. The AEG-Transformatorenwerk produces various types of motors from originals designed and developed in its technical bureau. Models are tested by visiting German technicians and final decisions are based on their recommendations. The Russians then determine the number of motors to be produced and shipped to the USSR.
4. Up to recently, food grants were made to the German employees according to their employment status. Specialists receive food packages each month, but the free lunch for workers has been discontinued. The food packages for foremen are issued according to the employee's grouping and accomplishments; the cost of the packages to the recipients ranges from twelve to 120 marks and is apparently related to salaries, e.g., the technical director of the machine division is paid 1,200 marks per month.
